

SMART Response

Take a look at this picture. Does this look like something you would have used when you were in school—10, 20, 30+ years ago? Most likely not! Well, it is something that is being used at Terrace Ridge! The 'remote' that you see here is called a Smart Response unit (formerly known as Senteo). It is a wireless, handheld device that allows students to program in their answers to questions on an individual basis. It then records their responses and allows the teacher to see how students are understanding particular concepts.

This software, which is integrated with SMART notebook, definitely makes it less complicated to create quizzes and tests

and then to manage, track, and analyze the results. Not only that, students LOVE using this piece of technology!

Here are some of the comments that you will hear from students who use this on a regular basis:

“When are we using the clickers again?”

“Are we using the clickers to-

day?”

“Why can't we use the clickers all of the time?” “When can we have a quiz?” (NOW...when was the last time you heard a statement like that!)

It's great to see how the use of this technology tool is increasing engagement in student learning! So, if you're interested in trying this tool out, just ask, and we will gladly demonstrate how it works! In fact, it might make you wish that you could come back to school!
