

# SMARTboards at Terrace Ridge

Did you know that **EVERY** classroom at Terrace ridge has a SMARTboard? What exactly is a *SMARTboard*? It is a device used in conjunction with a computer and a projector that is **interactive**. Meaning...students and teachers can manipulate objects, images and words on the screen as a way to demonstrate all kinds of ideas. The possibilities are really endless when it comes to this piece of technology! Not only that, it is a never-ending source of engagement for students at any age!

If you want to know more about this piece of technology, just ask! Or better yet, why not have your child's teacher to give you a demonstration of how it works!

*Pictured above:* Here is just one example from Mrs. Soderberg's Math class of how a SMARTboard can be used interactively.
